**The future of Ozioma**

While we don't know exactly what will happen next, we have some ideas. We would like to expand additional health topics, definitely add more races. I think most importantly we would need to automate the data upload process. Right now, we're actually manually collecting all the data and aggregating and I think we would definitely need to find a way for CDC or SEER or any one of those organizations to actually be able to upload their own data or have a system that was kind of pulling from their data bases.
